

Public Whitepaper

I. Intro

Cryptocurrency using blockchain technology, unlocks an opportunity for many projects on the market because it is used in a decentralized way so that no single person or group has control; all users collectively retain control.

We have seen this technology used in cybersecurity, payments systems, charity, animal rescue tokens and environmental focussed coins.

Our digital world is expanding rapidly. Accessibility to cryptocurrencies has become easier for the everyday person. It is better understood and it is increasing part of our daily lives through investment portfolios and new ways to pay using digital currencies.

Blockchain technology has provided an opportunity to create a community of like-minded people all over the world to come together to create cryptocurrencies for charity projects. This has led to the development of 'The Children's Token'.

II. What is driving the need for The Children's Token?

Children's Token has been created for those who need it the most.

All over the world children have to deal with pain, rejection, illness, mental health issues, poverty, child labour and abuse.

Too many people use children in ways that will harm and destroy their childhood.

Our aim is to eradicate this harm.

Some Facts about Children

- 152 million children are victim of child labour
- 1 billion children are victim of child abuse
- 1 billion children are multi-dimensionally poor
- 54.6 million children are terminally ill, and have last wishes

Every child should start life with the potential to become whoever they want and follow their dreams. Every small step we take will help, and we believe that with bigger steps we can make via the Digital Crypto world we can achieve a lot and change many young lives.

III. Children's Token Vision

As we all know, a basic charity foundation establishes itself through donations with a portion of that donation being used for marketing and staff salaries. This leaves around 20-30% for the actual charitable work that is needed. If we can ensure that 100% goes to those who need it, we will be pioneering a totally different approach to charity. We will be UNIQUE!

We are here to eliminate third party organisations!

So how can we achieve this?

We have created a token with the idea that we can eliminate any third-party organisations and enable children to benefit from 100% of the donation and buy the goods, services and support that children actually need. We created this token with the idea that we can eliminate any third party organizations and the children will benefit the 100% of the donation.

The difference with this charity token is not to pass money through the system where it is subject to corruption, but the intention to purchase the goods, services and support that children actually need.

- New furniture/toys/books/clothes for an orphanage
- Medical equipment for a children's hospital
- New equipment to help children with disabilities
- Expensive treatments for sick children
- Scholarships for brilliant children that can't afford to get a proper education
- Salaries for people who take care of abused children
- Sport scholarships for talented children

These are a few examples of what we hope to achieve with the charity token and the community. All donations will be chosen by the community and holders of The Children's Token.

IV. Tokenomics

We have set up the tokenomics model below which will benefit the aims of the community and assure the sustainability of the token.

- 10% taxation per transaction
- 4% redirect to the Holders
- 4% Liquidity Pool / Burn
- 1% Charity Wallet
- 1% Marketing Wallet

Liquidity pool coins will be sent to the locked wallet making the coin un-ruggable. This provides full transparency of the project.

4% will be redirected to the holders of The Children's Token to reward holders and incentivise long term investment. 1% will go to the time-locked Charity wallet to ensure sufficient funds are available for donations.

When a donation is to be made, the charity wallet will be unlocked by notifying the community. The amount to be donated will be predetermined and selected by the community. All transactions will be traceable for full transparency.

1% of the funds will go to the marketing wallet to ensure the longevity of the charity token. Marketing will be crucial for the growth of the community and to attract new investment.

Marketing will consist of paying, influencers, billboards, commercials and carrying out contests.

V. Donations App

In the process we want to create an app where institutions, other charity foundation, individual can request a donation. This request will be reviewed by the team and will get voted on by the community/holders. The request with the most votes will receive the donation. The requests made will need to be helping children as the focus.

Children who are sick, abused, orphan, homeless, child labour or parents who don't have the money to pay school or sports.

NOTE: We don't Donate the money, but we (donate) pay the require bills for it. So we know for sure this will arrive for the Children.
